We make

Eurotrol provides high specification, custom-made quality control materials (QC) for the periodic verification of the precision and accuracy of in vitro diagnostic (IVD) analyzers. Our products are produced by an integrated ISO-approved process, from research and development through production, in which only the highest quality materials are used.

For

Eurotrol B.V.

- Diagnostic industry
- EQAPPT programs
- Standardization bodies
- Hospital laboratories
- Point of care sites

Eurotrol
Quality Control Solutions for In Vitro Diagnostics

CueSee® Hypoxic the world's only critically low pO₂ control

CueSee® Hypoxic

In order to successfully validate low pO₂ results, many point of care coordinators who work with blood gas analyzers are now facing the need to validate pO₂ results to meet CAP or Joint Commission regulations.

For this very reason, Eurotrol created CueSee Hypoxic, the world's only critically low pO₂ control assesses acute low pO₂ range of blood gas analyzers. It has a true hemoglobin matrix with a real O₂ saturation curve, yielding blood-like precision at a pO₂ as low as 15 mmHg.
